Ghiringhelli Mario

Advanced EMI & EMC Shielding Solutions

Company Overview

Ghiringhelli Mario is an Italian company specialized in the design and production of high-performance EMI (Electromagnetic Interference) and EMC (Electromagnetic Compatibility) shielding solutions. The company supports industries that require reliable electromagnetic protection for electronic devices, enclosures, and sensitive systems. With strong technical expertise and a customer-focused approach, it delivers both standard and customized shielding technologies.

Product Portfolio

The company offers a comprehensive range of EMI/EMC shielding products, including shielding gaskets, conductive elastomers, conductive silicones, shielding windows, conductive films, metal meshes, and precision-machined components. These products are engineered to provide high attenuation performance, mechanical durability, and long-term stability in demanding environments. Applications include industrial automation, telecommunications, medical devices, aerospace systems, and defense electronics.

Custom Engineering & Manufacturing

A key strength of Ghiringhelli Mario lies in its ability to develop tailored solutions according to specific customer requirements. Through advanced CNC machining, plastic material processing, and precision fabrication, the company ensures accurate integration within complex electronic enclosures. Strict quality control procedures guarantee compliance with international standards such as RoHS and other EMC regulations.

Commitment to Quality

Driven by innovation, flexibility, and technical competence, Ghiringhelli Mario positions itself as a reliable partner for OEMs and engineers worldwide, delivering efficient, compliant, and high-performance EMI shielding solutions for global markets.
